Digital Literacy -Project Report

Name: Abhishek Sivan S

Reg no: 25BCE10375

Branch: CSE Core

Year: 1st year

Course Code: CSE0001

Date: 30-3-2026

Introduction

Digital literacy has become an essential skill for students in today's quickly changing digital world, allowing them to participate successfully in social, professional, and academic settings. It now encompasses more than just a basic understanding of computers; it also involves the capacity to conduct professional communication, assess online content, uphold a responsible online persona, and protect oneself from cyberattacks. This project, which is part of VIT Bhopal University's CSE0001 Digital Literacy course, aims to assist students in developing these crucial skills through real-world application.

I have assumed the role of Student Digital Ambassador as part of this assignment, with the duty of assisting peers in comprehending and utilising digital tools effectively and morally. The project entails building an extensive Digital Literacy Portfolio that showcases work from five major modules and is arranged within a GitHub repository. These include creating an infographic about digital awareness, creating a polished online portfolio, investigating coding and collaboration tools, honing email etiquette, and raising awareness of cybercrime and online safety.

Every task in this project focuses on practical abilities like cybersecurity awareness, digital communication, critical thinking, and teamwork. This project encourages responsible and informed technology use while also improving technical knowledge through practical experience with a variety of tools and platforms. All things considered, it lays the groundwork for creating a solid and polished online persona that will be useful for both my academic and professional endeavours.

Digital Literacy Task 1 Project Report

Task 1: Digital Literacy Awareness Infographic

I used Canva, an easy-to-use online design tool, to create an infographic about digital literacy awareness for this assignment. The goal was to create an eye-catching one-page resource that teaches students the value of digital literacy in

the modern world. Important subjects like the definition of digital literacy, safe internet usage, and upholding a professional online presence are all covered in my infographic.

To make sure the information is clear and visually appealing, I used straightforward icons, brief text, and a tidy layout in the design. I emphasised crucial ideas like safeguarding private data, creating secure passwords, and exercising caution when interacting online. Additionally, I provided instances of practical digital resources that students can utilise for education and teamwork.

Organising the content in a small area without making it appear crowded was one of the challenges I encountered when making the infographic. However, by concentrating only on the most pertinent information, this helped me hone my design and content selection abilities. All things considered, this assignment improved my creativity and helped me grasp how to effectively convey information in a digital format.

Digital Literacy Task 2 Project Report

Task 2: Build Your Student Digital Portfolio

I set up profiles on websites like GitHub, LinkedIn, and Kaggle in order to create and update my professional online presence. Students, recruiters, and professionals use these platforms extensively to display skills, work together on projects, and look into career options.

I made a README profile on GitHub with my basic academic information and a brief synopsis of my learning objectives. I will be able to store and display my coding assignments and projects with the aid of this platform. I finished my education section on LinkedIn and started creating a professional profile for networking and internship opportunities. Kaggle was investigated as a platform for learning data science ideas, competing, and honing analytical abilities.

This assignment helped me realise how crucial it is to uphold a professional online persona from a young age. I intend to frequently update these platforms with my projects, accomplishments, and new abilities over the course of the

next four years. In addition to improving my technical profile, this will make me more visible to internship coordinators and prospective employers.

Digital Literacy Task 3 Project Report

Task 3: Explore Coding & Collaboration Platforms

In order to comprehend their function in academic learning, I investigated both cloud-based collaboration tools and coding practice platforms. I made an account on Hacker Rank and finished a beginner-level task for the coding practice portion. This made it easier for me to comprehend the fundamentals of problem-solving and how coding platforms assess programming abilities and logical reasoning. Additionally, it gave me the confidence to practise more problems on a regular basis.

I created a five-question, multiple-choice and short-answer Digital Literacy Awareness Quiz using Google Forms for the collaboration portion. In order to better understand how data can be gathered and analysed effectively, I also looked at the responses using the Google Sheets that were linked.

This task taught me how important it is to use both technical practice and collaboration tools. Hacker Rank and other coding platforms will help me improve my programming skills. Google Forms and other tools will help me run surveys, get feedback, and organise information. These platforms will be very helpful for learning, practicing, and working on group projects while I'm in school.

Digital Literacy Task 4 Project Report

Task 4: Email Etiquette and Digital Communication

This task taught me how important it is to communicate professionally by email and act responsibly on social media. When a student sends an email to a professor without a clear subject line, greeting, or message, it can lead to problems. This is a common example of bad digital communication. For

instance, sending an email that says "Send assignment" without any context can be confusing and rude.

By following proper email etiquette, such as writing a clear subject line, using a polite greeting, structuring the message correctly, and ending with a formal sign-off, you can avoid these problems. Also, it's important to be professional on social media because how you act online shows who you are and what you believe in.

I learned that in school and at work, it's important to communicate clearly, politely, and in a way that makes sense. Small mistakes can make a bad impression if they aren't handled carefully.

Digital Literacy Task 5 Project Report

Task 5: Cybercrime Awareness and Reflection

While doing this task, I learned more about UPI/Online Payment Fraud and how these kinds of cybercrimes happen in real life. I was especially surprised to find out that most frauds don't use advanced hacking methods; instead, they use social engineering techniques like making people panic, feel rushed, or trust them. People who commit fraud often pretend to be bank employees, customer service representatives, or sellers in order to trick victims into giving up private information or approving payments.

This task helped me realise how important it is to pay attention when using digital payment systems. I learned that even a small mistake, like entering a UPI PIN without checking the request, can cost you money. So, one important thing I will do is always check to see if a payment request is real and not click on or answer calls from numbers I don't know. In general, this activity helped me learn more about how to be safe online and how to use technology responsibly.

Conclusion

This Digital Literacy project has taught me a lot about the digital world and how to use it responsibly. By finishing all five tasks, I learned important skills like how to make useful digital content, how to build a professional online presence, how to communicate well through email, and how to stay safe online. Each module gave students hands-on experience with tools and platforms that are very useful in school and at work today.

The project also helped me understand how important it is to keep a good digital identity and be careful when I talk to people online. I also learned more about common cyber threats and how to protect myself from them. In general, this project has made me more sure that I can use digital technologies safely and effectively. The things I learn and the skills I gain will help me in school and be very important for my future career.

This project also made me want to be a more responsible and proactive digital citizen. As a Student Digital Ambassador, I now feel more sure of myself when I tell my friends how to use digital tools safely and well. I will keep using what I've learned in my daily life and work to improve my digital skills over time. This will help me stay up to date with new technologies and be responsible online..
